Professional Summary

Senior Frontend Engineer with 4+ years of experience designing, building, and scaling high-performance web and mobile applications using React, TypeScript, and React Native (Expo). Proven track record of architecting robust frontend solutions, optimizing application performance, and establishing engineering best practices that drive 35%+ performance improvements across enterprise-grade products. Passionate about writing clean, maintainable code and building reliable, scalable applications that deliver exceptional user experiences.

Professional Experience

Frontend Developer, GoStack
02/2026 – Present
Cairo, Egypt

Led cross-functional teams and developed scalable web and mobile applications across GoStack projects using React, TypeScript, and React Native. Managed code quality, performance optimization, with hands-on experience deploying and publishing applications to the Apple App Store and Google Play Store.

Senior Frontend Engineer, 3C Coding School
01/2025 – 01/2026
Cairo, Egypt

Engineered and optimized the 3C LMS frontend using React, TypeScript, and React Query, supporting 5,000+ active students with scalable architecture. Built a reusable, accessible component library using Tailwind CSS, reducing UI development time by 25%.

Education

B.S. in Electrical Engineering – Control,
09/2021
MTI Modern University for Technology & Information

Core Skills

Technical Skills

- **Languages & Frameworks:** JavaScript, TypeScript, React.js, React Native (Expo), Redux Toolkit, Zustand
- **API & Deployment:** React Query, REST APIs, App Store & Google Play deployment, Postman, ApiDog
- **Version Control:** Git, GitHub

Architecture

- **Frontend Engineering:** Frontend Architecture, Micro-frontends, Component-Driven Development, Reusable Component Libraries, Performance Optimization
- **Testing & Code Quality:** Code Reviews, Jest, React Testing Library, Unit & Integration Testing

Selected Projects

GoEstate , Real Estate Platform
- Developed a dynamic Template Builder, similar to WordPress, enabling users to customize and build real estate website layouts with flexible, reusable components.
- Built scalable frontend components using React.js and TypeScript, focusing on maintainability, flexibility, and performance.
- Integrated RESTful APIs and followed frontend best practices to deliver a responsive and maintainable user experience.

GoChat , WhatsApp CRM Platform
- Developed frontend features for a WhatsApp CRM platform, including a unified team inbox for customer conversations and conversation assignment workflows.
- Implemented interfaces for lead management and sales pipelines, enabling teams to track customer journeys and organize follow-ups.
- Built user-facing features for WhatsApp campaign management, workflow automation, and performance analytics to streamline customer communication and team operations.

Nota , Legal Case Management Platform
- Developed mobile application features for legal professionals to manage case records, track court hearings, and organize legal procedures.
- Implemented interfaces for tracking court fees and accessing case-related information, helping lawyers streamline their daily legal workflows.
- Focused on delivering an intuitive user experience that simplifies case management and provides centralized access to essential legal data.

Mokhtabary , Medical Testing Mobile Application
- Developed mobile app features for booking medical tests, selecting home collection locations, and scheduling appointments based on user preferences.
- Integrated electronic payment workflows and PDF-based medical result access, enabling users to manage test bookings and results digitally.
- Implemented test history, location selection, and notification features to simplify appointment follow-ups and improve the overall user experience.

Connect Homes Freelancers , Real Estate Mobile Application
- Developed mobile application features enabling real estate freelancers to access live property inventory, unit availability, pricing, payment plans, and property specifications.
- Implemented project documentation access and PDF downloads, allowing agents to retrieve and share project brochures, floor plans, and master plans with clients.
- Built user interfaces supporting property discovery, location-based project exploration, and streamlined access to real estate sales resources.
